9.02 days
AVG. DELIVERY TIME

INSIGHTS — ORDER FULFILLMENT

- Of 99K total orders, 96K (97.02%) were successfully delivered, while 3K (2.98%) were not carried, delivered late, or not approved.
- Average delivery time sits at 9.02 days against an average shipping lead estimate of 2.66 days, pointing to a gap between promised and actual delivery windows.
- The delivery time trend shows a sharp drop from mid-2016 through 2017, followed by a more gradual, steady decline through 2018 — logistics efficiency improved significantly year over year.
- Delivery times vary widely by state, ranging from roughly 8.5 days (SP) up to nearly 28 days in more remote regions — a strong case for regional logistics partnerships.

INSIGHTS — SATISFACTION & COMPLAINTS

- Revenue grew to \$8.57M (+5.83% YoY 2018), alongside a generally strong average review score of 4.09.
- Bed & Bath, Health & Beauty, and Sports & Leisure are the top three product categories by order volume — key targets for promotional focus.
- 41.35% of complaints are for products not received or arriving late, followed by delivery delays (27.06%) — together over two-thirds of all complaints trace back to fulfillment, not product quality.
- Complaint categories tied to logistics failures also carry the lowest average review scores (1.28–1.58), confirming delivery performance is the single biggest lever for satisfaction.

PAYMENT METHOD ANALYSIS & STRATEGIC SUMMARY

PAYMENT & SELLER PERFORMANCE

- Credit cards dominate payment behavior at 75K transactions, well ahead of boleto (20K), voucher (3K), and debit card (2K).
- Credit card users average 3.53 installments per order, making installment financing an almost exclusively credit-card behavior (platform-wide average: 2.92).
- Delivery-period variation is highly seller-city dependent: São Paulo delivers fastest (8.5 days) while Boa Vista and Macapá average 27.67 and 26.64 days respectively.

SUMMARY

- The project analyzed Olist's order fulfillment, customer satisfaction, product performance, and payment behavior across the marketplace.
- Delivered a 97% order success rate against clear regional delivery-time gaps.
- Identified late/undelivered orders as the leading driver of low review scores.
- Quantified payment and installment behavior, showing credit cards as the primary financing channel.

RECOMMENDATIONS

- Prioritize logistics partnerships or local warehousing in high-delay cities (Boa Vista, Macapá) to close the delivery-time gap.
- Focus proactive customer service outreach on delayed/missing orders before reviews are submitted.
- Prioritize top categories (Bed & Bath, Health & Beauty, Sports & Leisure) for inventory and promotional spend.
- Offer incentives for higher installment brackets on credit-card orders to lift average order value.
